DIVYAJYOT SINHA

Computer Engineering Student | Software Development | Frontend & UI/UX | Cybersecurity
+91 7559190438 | divyajyotsinha10@gmail.com | GitHub | LinkedIn

Profile

Frontend-focused Computer Engineering student at Thakur College of Engineering & Technology, specializing in Advanced Cybersecurity & Quantum Cryptography, with hands-on experience building academic applications across UI/UX, Java web development, REST API integration, databases, and deployment. Interested in software engineering, interactive applications, and cybersecurity, with a practical approach to building useful and user-focused applications.

Education

Thakur College of Engineering & Technology **Expected 2028**

B.E. Computer Engineering | Advanced Cybersecurity & Quantum Cryptography Specialization

Relevant Coursework: Privacy & Security in Online Social Media, Social Media APIs, Privacy & Data Protection, Security Threats, Identity Resolution, Anonymous Networks, Location-Based Privacy.

Technical Skills

Languages	Java, Python, C/C++, JavaScript, SQL
Web & Application	HTML, CSS, JSP, Servlets, Spring Boot, REST APIs
Tools	Git, GitHub, Eclipse, Visual Studio Code, Apache Tomcat
Database	SQL, Database Integration
Networking & Security	Linux, Cisco Packet Tracer, IP Addressing, DHCP, Routing, VLANs, Cryptography Fundamentals
Cloud	AWS EC2, VPC, Subnets, Security Groups, CloudWatch

Selected Projects

Pharmacy Inventory Management System *Full-Stack Development*

Java | JSP | Servlets | HTML/CSS | SQL | Tomcat

- Developed a web-based pharmacy inventory application covering authentication, medicine management, inventory workflows, and user-facing interfaces.
- Led most of the implementation across frontend, backend, database integration, UI development, application configuration, and deployment.
- Implemented barcode-based medicine handling and maintained the project source and deployment workflow through GitHub and Apache Tomcat.

MetroPass – Metro Ticketing System *Frontend / UI/UX*

Spring Boot | REST APIs | JavaScript | HTML/CSS

- Designed and developed the frontend and UI/UX for a Spring Boot based metro ticketing application, collaborating with a backend-focused teammate.
- Designed passenger flows covering station and route selection, journey planning, ticket generation, payment interfaces, and digital-ticket presentation.
- Integrated frontend interactions with REST APIs and refined responsive layouts, light/dark themes, and interface motion for a polished user experience.

GeoCoderZ – Disaster Report Location Platform *Frontend Development*

Interactive Maps | Frontend Development

- Developed and deployed the frontend for a disaster-reporting platform designed to present locations identified from incident reports through an interactive map.
- Built user-facing interfaces for visualizing incident information and identified locations through a clear, map-oriented workflow.
- Continued project development planning for broader use cases and future multilingual support.

Interests

Game Development | UI/UX | Software Development | Cybersecurity | Interactive Applications
